

[Download Free Utm To Lat Long Converter Spreadsheet](#)

A screenshot of a web-based application window titled "Lat Long Converter". The window has a blue title bar with a close button (X) on the right. Below the title bar is a navigation menu with five tabs: "DMS to DD", "DD to DMS", "Lat/Long to UTM", "UTM to Lat/Long", and "Distance". The "Distance" tab is currently selected. The main content area contains two sections for inputting coordinates. The first section is labeled "Start Lat/Long (DD)" and has two input fields: "Latitude:" and "Longitude:". The second section is labeled "End Lat/Long (DD)" and also has two input fields: "Latitude:" and "Longitude:". Below these sections is a "Calculate >>" button. To the right of the button is a "Distance:" label followed by two input fields, one for "miles" and one for "KM". At the bottom left of the window, the URL "www.latlongconverter.com" is displayed.

[Download Free Utm To Lat Long Converter Spreadsheet](#)

Tip! - If you have a csv list (or file) where the sequence of the input coordinates are in wrong order - open the csv list (or file) in a spreadsheet - move the columns with the coordinates to the right position according the required sequence - save the spreadsheet as a new csv file - open the csv file in a simple text editor - copy and paste the list into the input field above - Convert! The converter is valid for the northern hemisphere.

1. [lat long converter spreadsheet](#)

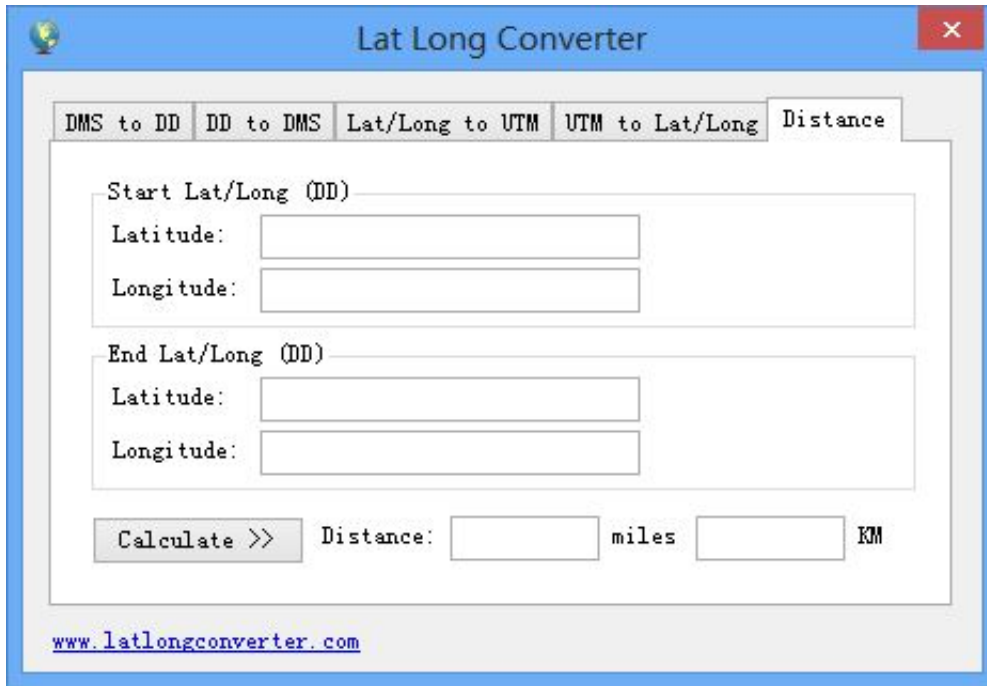

However, for high-precision surveying work - be aware that the two systems deviates more than half a meter.. The units for both east and north coordinates are meters The UTM north coordinate is the projected distance from equator for all zones.. The east coordinate is the distance from the central median European Reference System - ETRS89 Note that the World Geodetic System WGS84 and the European Reference System ETRS89 are virtually identical and that coordinate transformation between the two systems in practical navigation is unnecessary.. Convert a List of UTM Coordinates You can use the tool below to convert a list of many UTM coordinate points to their latitude and longitude values.. Each zone is based on a specifically defined secant Transverse Mercator projection.

lat long converter spreadsheet

lat long converter spreadsheet

Click "Convert!" to add latitude and longitude to the coordinates Note! - keep the first line in the text box untouched.. Copy the list with the latitude and longitude values and paste it into a spreadsheet, a text editor - or whatever you prefer - for further processing.. *) Based on the WGS84 Datum - the calculator is valid for the northern hemisphere..
